Spinning Drum

What you need

2 paper bowls
Tape or glue gun
Drinking straw
Ribbon
Beads
Scissors

Optional extras - pens, paint, stickers

How to make

Attach the straw to the bottom side of one of the bowls.

Stick a strand of ribbon on the right and left side of the bowl lip opposite each other.

Glue the other bowl onto the top of the other one.

Tie some beads onto the ends of the ribbons.

Decorate as you wish

For sound seekers it is important we have opportunities for them to be in control of the sound created.

Auditory
You can add as many strands as you want to make more sound. You can also add rice inside the drum to create sound with movement, like a shaker.

Proprioception
A great activity for anyone who like tapping, pushing, pulling and banging things for proprioceptive input.

Drums are great for proprioceptive input aswell.
