

WALT: To find out about the nature in Mrs Colyer's back garden

Here are three different types of **bee** visiting the same plant in my garden one afternoon. **Look closely!**

Can you find any wildlife in your local park or your back garden?

There are some **tadpoles** in my garden pond. They have hatched out of their jelly eggs. They are eating the pond weed. They are swimming around using their tails because they do not have any legs yet!

How many tadpoles can you see in the picture?

There are lots more in the pond!

Which creature will they change into over the next few weeks?
